Size Charts

HOW DO I MAKE SURE TO GET THE RIGHT SIZE?

To measure your feet:

1. Get a blank piece of paper, a pencil and a tape measure.
2. Stand with one foot on the piece of paper and have most of your weight on your foot to simulate walking.
3. Holding the pencil perfectly vertical and perpendicular to the paper, mark a line at the back of your heel and at the tip of your longest toe. Also mark a line along each side of the widest part of your foot.
4. Measure length and width to the nearest 16th inch and subtract .20 to .25 inches, or .50 centimeters, to account for the width of the pencil.
5. Find your corresponding size in the charts below (next page).

A couple of tips to get the perfect fit:

- Measure your feet later in the day as feet normally swell and can become up to half a size bigger in the evening.
- Measure both feet and use the measurements of the biggest foot. Many people have feet that are different sizes.
- Wear the same type of socks you will generally be wearing on the job when you measure your feet.

Here are some general guidelines to assess fit once you've received your new boots:

- Try on new boots towards the end of the day.
- Walk around in a clean environment for a couple of hours to make sure the boots are comfortable.
- Try boots on both feet, as many people have feet that are different sizes.
- Boots should fit snugly around the heel and ankle when laced.
- The inner side of the boot should be straight from the heel to the end of the big toe.
- The boot should grip the heel firmly.

SIZING TIPS:

Men: Size down a 1/2 size from your athletic shoe size.

Women: Size down your normal size 2 whole sizes to find your size in men's.
